Students and Staff identified people from various backgrounds and professions who they consider to be inspirational neurodiverse people.

Neurodiversity describes ALL humans.

We all have brains that do the same thing but we are ALL Individuals too.

We are NOT one size fits all – we are ALL different from one another.

Android

i phone

These phones look almost the same and effectively do the same thing but in a different way

Brains are the command centre for the Human Nervous System, receiving signals from our whole body and translating them.

1 in 7 people have Neurodivergent brains.
These Neurodivergent brains are a normal part of human genetics, which is naturally diverse.

Neurodivergence can be an advantage and is valued. Different ways of thinking produce skills, creativity, problem solving and talents.
